

# FIRST EVER POLISH DOCTORS' CALL FOR CLIMATE ACTION

## Who is most vulnerable to the health impacts of climate change?

## The risk factors for health:

## Which areas that burn fossil fuels need to be tackled?

## WE CALL FOR

### REDUCING GREENHOUSE GAS EMISSIONS

and end other activities leading to the degradation of the natural environment.

### PROTECTING HEALTH

from environmental degradation and pollution; and make this the overarching goal of measures at all levels of the administration, and for professional and social groups.

*As physicians and scientists dealing with health care, feeling responsible for the Polish society's health, we appeal to decision-makers of different levels and to the whole population to dramatically intensify the actions that **protect the life and health of current and future generations** from harmful effects of climate change.*

**LEKARZE  
DLA KLIMATU**
